

FROM LEARNING TO OWNERSHIP

MADE SIMPLE

THE BIG IDEA

Learning becomes powerful when students can see it, talk about it, and reflect on it.

- Visible = students understand what they're learning
- Shared = learning is expressed and discussed
- Owned = students take responsibility

“Can students explain what they're learning—and how they're improving?”

THE MIRROR METAPHOR

Learning is like looking in a mirror.

If students can't see it... they can't improve it. When learning is visible, they can notice, adjust, and grow.

Think: Visibility + Reflection = Growth

THREE PILLARS

SEE IT (Clarity)

Learning goals, success criteria, modelling

SHARE IT (Expression)

Peer discussion, performances, Seesaw, explanations

OWN IT (Reflection)

Self-assessment, feedback, goal-setting

REFLECTIVE QUESTIONS

Ask Yourself:

- Can students describe what success looks like?
- Are they talking about their learning—or just doing it?
- Do they know what to improve next?
- Is feedback something they receive... or use?
- Can students show their learning in more than one way?

WHY IT MATTERS

If students can see their learning, they can take control of it. It...

- Builds ownership & deepens understanding
- Drives better feedback & clearer next steps
- Boosts motivation & makes progress visible
